

PRODUCT OVERVIEW SPALTFIX 2023

The best machines for maximum performance

POSCH is clearly the innovation leader as far as large machinery for firewood processing is concerned. No other product on the market combines maximum know-how, high-quality components and a sturdy design to achieve durability so masterfully.

State-of-the-art production for powerful machines

In order to exhaust all technical possibilities for their products, POSCH uses only state-of-the-art processes for premium-quality manufacturing.

High-quality components for long operating hours

Every machine is as powerful as its individual components. For that reason, we pay particular attention to performance and durability when selecting the components.

Customer proximity creates excellent solutions

As we are in touch with large numbers of users, we are aware of the precise requirements for profitable firewood production. We always try to keep improving machines that have proven successful in everyday work.

Our promise: 20 years spare parts supply guaranteed

Efficient cutting & splitting

Firewood processing for professionals

There is no way around Southern Styria as far as investments in a powerful and durable solution for premium firewood are concerned. In Leibnitz, there is one of the most advanced production sites for machinery for firewood processing. The firewood processors made by POSCH fulfil the most exacting requirements world-wide.

More quality through manufacturing competence

POSCH builds each individual machine based on a combination of technical competence and state-of-the-art production processes. Laser cutting systems, CNC cutting and welding robots ensure maximum precision. Our experienced welders, qualified according to DIN, ensure the highest quality of the welded structures every day.

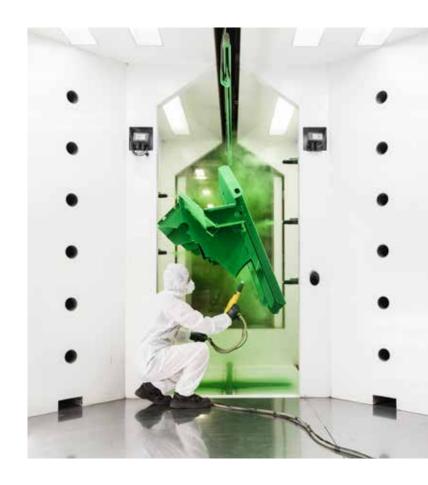

Cutting-edge technology ensures a long service life as standard

Our machines are designed for maximum power, durability and minimum maintenance right from the start. Only the most innovative processes are employed in production. The combination of our excellent solutions always ensures an optimum product quality.

Leibnitz: the birthplace of durability

To ensure the highest production quality, we keep investing in the best processes for manufacturing and in quality control.

Sturdy design and accuracy guarantee a stable value

When everybody does their job really well, good ideas result in top products with a particularly long useful life. The declared goal is to guarantee a long useful life for our products.

The POSCH production chain

How to make firewood processing

Continuous charging

Longitudinal and cross conveyors can be combined in the best possible way according to tasks and requirements. After the smooth transfer of the logs by means of a tractor, forklift truck or timber loading crane, logs with a diameter of up to 65 cm are smoothly passed on to the firewood processor.

→ see from page 37 onwards

firewood processor

An automatic firewood processor from POSCH turns whole logs into neat billets and makes firewood processing really profitable. We realise sturdy solutions with a stable value, ranging from mobile all-purpose units to firewood factories with an extraordinary hourly output.

→ see from page 12 onwards

For everything ranging from the continuous supply of very large logs to efficient firewood processing and neat further processing and packaging, we offer you optimum solutions from a single source.

Efficient billet handling

Transporting, cleaning, packing up and loading have never been so easy. In addition, these additional machines improve the quality of firewood. The great hourly throughput and the great input power make sure that even large facilities never stand idle any more, and you profit from improved billet quality and increased profitability hour after hour.

→ see from page 41 onwards

True power for sawing and splitting

Increases output in firewood processing

A POSCH firewood processor turns whole logs into neat billets and makes firewood processing really profitable for you. We realise sturdy solutions with a stable value, ranging from mobile all-purpose units to firewood factories with an extraordinary hourly output.

SpaltFix series from POSCH

The perfect sawing/splitting system for all requirements

- **Mobile option:** For best results in different locations, these machines can be equipped with a suitable chassis.
- **Saw blade with the S-series**
- **(K)** Chain saw with the K-series

The tried-and-tested system.
The push-on splitting knife can be

changed without tools and delivers quick results with max. 8 billets per cycle.

MULTI splitting system

More options without knife change.

The hydraulically adjustable frame knife adapts to the log diameter and produces up to 18 billets per cycle without knife change.

VARIO splitting system

Variability for standardised results.

The system with the X-shaped splitting knife produces high-quality firewood in single varieties with the set edge lengths from 5 to 15 cm.

Saw blade with the S-series

The powerful **WIDIA saw blade** impresses with a great cutting power and a long useful life.

© Chain saw with the K-series

The **SuperCut harvester saw** ensures quick and safe cutting with log diameters up to 70 cm. Integrated hydraulic chain and blade tensioning as well as a chain oil tank ensure low-maintenance operation.

STANDARD splitting system

SpaltFix S-375 The firewood processor with WIDIA log saw

SpaltFix S-375

The incredibly powerful multipurpose solution

Continuous charging and safe splitting

The feed belt puts the log in the sawing position. The hydraulic downholder and the automatically lifting timber stop prevent logs from jamming.

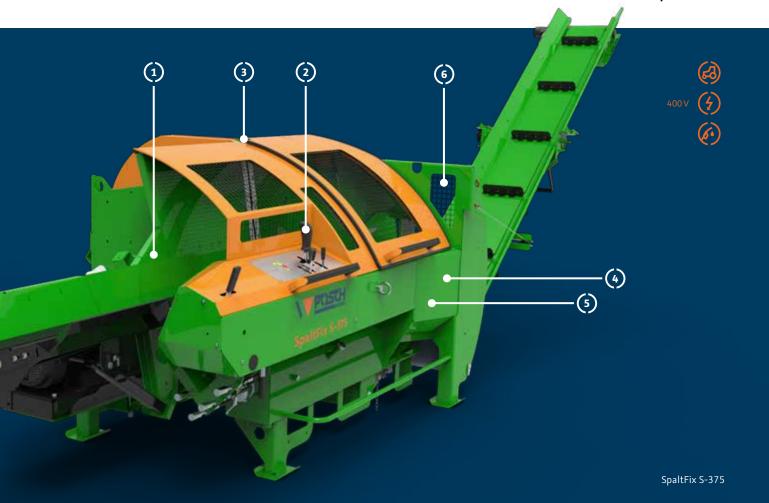

Easily controlled via joystick

As soon as a log has reached the SpaltFix, the cutting and splitting process can be controlled safely and easily by means of the joystick.

Powerful WIDIA saw blade

For an increased cutting performance and a longer useful life, a reinforced WIDIA saw blade with a diameter of 90 cm is installed.
This guarantees a more quiet and more powerful cutting process.

OnlyCut system for more options

The SpaltFix S-375 can also be used as a high-performance saw without splitting knife. The splitting knife can be removed in only a few steps, and then the unit produces the desired sawn timber in a short period of time. Short sections, for example, can be processed into kindling in the Autosplit.

Saves you a lot of time during firewood processing

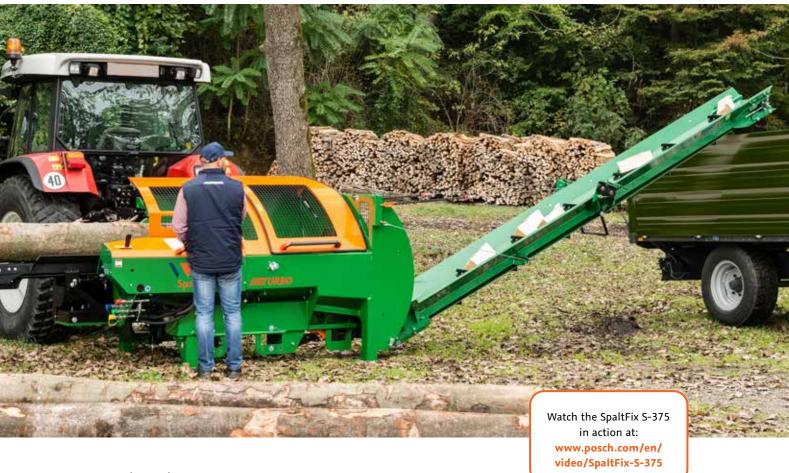

With the Autospeed, the SpaltFix automatically selects the right splitting speed. It cuts, splits and loads in one working step and so produces up to 8 billets at maximum speed each time.

6 Compact dimensions for easy transportation

Thanks to the three-point linkage, the SpaltFix is ideally equipped for demanding field applications. Within a short period of time, it can be switched from the transport to the work position and so is ready for action immediately.

The SpaltFix S-375

Compact power house and ultra-mobile solution

It is easy to transport and so produces the required firewood for communities and firewood processors everywhere, and saves you a lot of time during processing.

Precise splitting process

The hydraulically driven log feed is easy to control using a joystick.

The hydraulically adjustable push-on knife can easily be changed without tools for **4**, **6** or **8** parts. When you take it out completely, the SpaltFix can be used as a high-performance saw.

SpaltFix S-375

The compact firewood processor with joystick control.

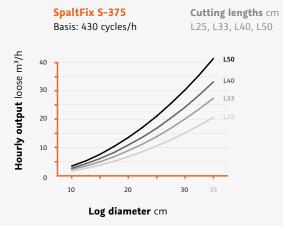

- → Log diameter 7-37 cm
- → Sawing system WIDIA saw blade Ø 90 cm
- → Billet length 20/25/30/33/35/40/45/50 cm
- → Hydraulic log feed system with 2-m feeding belt
- → **Hydraulic saw feed system** with automated stop ventilation and downholder function
- → 4-way splitting wedge as standard, 6-way or 8-way optional
- → Splitting force 12 t
- → Stamp advance/return speed max. 47/42 cm/s with Autospeed
- → Chip extraction connection Ø 15 cm
- → OnlyCut Function (to be used as a pure highperformance saw)
- → TURBO package for increased hourly output (optional)
- → Oil cooler (option) recommended from 4h continuous use onwards

TURBO package for even more billets per hour

The compact SpaltFix S-375 processes up to 20 loose m³ of firewood per hour. With the optional TURBO package, it processes even up to 25 loose m³/hour thanks to the compact sawing valve and the splitting stroke reducer that can be shut on and off.

More options with the right add-ons

The suitable **longitudinal chassis** makes the SpaltFix roadworthy and lets you get to the job site quickly.

A more efficient firewood processing process is guaranteed by the constant supply ensured by the **log conveying system** (longitudinal and cross conveyor).

see page 37

(*) MULTI splitting system

SpaltFix S-377 Multi | S-415 Multi More performance with the all-rounder

The centre of attention: SpaltFix S-415 Multi

More billets without changing the wedge

Everything under control with 2-hand joystick controls

As soon as a log has reached the feeding belt, the cutting/ splitting process can be controlled safely and easily by means of the 2-hand joystick.

Using the joystick, the log is hydraulically transported to the WIDIA saw blade via a conveyor belt. Log support systems comprising longitudinal and cross conveyors can be combined individually depending on the requirements.

Sawing unit with WIDIA high-performance saw blade

The WIDIA carbide saw blade with 100 cm Ø shortens the log to 20 to 50 cm and is particularly long lasting. The hydraulic log downholder safely retains the logs during the cutting process.

More possibilities thanks to the MULTI splitting wedge

The hydraulically adjustable MULTI frame splitting wedge can be adapted to the log diameter comfortably and produces 2, 6 or 12 billets per work step without having to change the wedge.

Smooth transfer of logs to the splitting process

The entire log section is transported to the splitting punch via the hydraulically operated wood rocker. The punch pushes the log against the splitting wedge.

Fast and efficient for higher profits

Optionally, billets can be cleaned and bagged ready for sale in one work step in addition. Optimise your firewood production with suitable conveyor belts, billet cleaning and bagging solutions from POSCH.

SpaltFix S-377 Multi and S-415 Multi

Jack of all trades: Many billets without changing the wedge

Logs with a maximum diameter of up to 41 cm are converted into up to 12 logs per work cycle. Thanks to the MULTI splitting system.

Operation via 2-hand joystick

The WIDIA saw blade shortens the log to the desired length up to max. 50 cm. With a splitting force of 15 or 18 tons, the log section is pressed against the adjustable-frame knife.

SpaltFix S-377 Multi

SpaltFix S-415 Multi

The compact firewood processor with WIDIA saw blade and frame knife.

→ Log diameter 10-37 cm

WIDIA saw blade.

- → Billet length 20-50 cm (adjustable in 1 cm increments)
- → Number of billets max. per cycle 12

The compact firewood processor with

- → Hydraulic log feeding with 1.1-m feeding belt
- → Cutting system WIDIA saw blade with a diamater of 90 cm
- → Hydraulic saw feed system with automated stop ventilation and double gripper
- → MULTI splitting system, no wedge changing required
- → Splitting force 15 tons

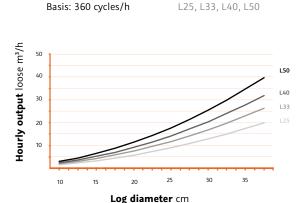

SpaltFix S-377

- → Stamp advance/return speed 33/36 cm/s with Autospeed
- → Chip extraction connector with a diameter of 15 cm
- → Oil cooler
- → TURBO package for increased hourly output
- → Manipulator, SawControl, automatic central **lubrication** optional

- → Log diameter 10-41 cm
- → Billet length 20-50 cm (adjustable in 1 cm increments)
- → Number of billets max. per cycle 12
- → Hydraulic log feed system with 1.1-m feeding belt
- → Sawing system WIDIA saw blade Ø 100 cm
- → Hydraulic saw feed system with double gripper and automatically stop ventilation
- → MULTI splitting system, no knife changing required
- → Splitting force 18 t
- → Stamp advance/return speed max. 37/36 cm/s with Autospeed
- → Chip extraction connection Ø 15 cm
- → Automated central lubrication for the splitting unit
- → TURBO package for increased hourly output

Get more work done with more cubic metres per hour.

Cutting lengths cm

Universal expansion options

The turbo function achieves a 25% higher splitting capacity, enabling hourly outputs of up to 45 loose cubic metre. Optimize your firewood production with suitable chain conveyors for log feeding.

SpaltFix S-415 Vario – Variable logs with saw blade

SpaltFix S-415 Vario

Produces billets of the required size from logs up to 41 cm.

Simple controlling of all processes with tried-and-tested joystick solution

The operator has all processes from charging to cutting directly under control. The optional manipulator makes the positioning of twisted logs easier.

The logs are transported to the sawing unit via the powerful feed belt. Log support systems comprising longitudinal and cross conveyors can be combined individually depending on the requirements.

PowerCut sawing unit with WIDIA high performance saw blade

The WIDIA hard metal saw blade with a diameter of 100 cm impresses with its very long service life and durability. The hydraulic log downholder safely fixes the logs during the cutting process.

The AutoSplit 415 produces firewood and neat kindling

For firewood with a length of 12–33 cm, the billet edge length can be adjusted variably from 4–15 cm. For optimum kindling with a length of up to 20 cm, finer billets are possible too.

Available on request: AutoSplit 650 for firewood up to 50 cm.

Smooth passing on of logs to the splitting process

The cut log section is passed on to the AutoSplit via the hydraulic ejection rocker and the log chute. The optional buffer belt is an ideal additional solution for the fast transportation from the sawing unit to the splitting unit.

6 More profitable production achieved fast and efficiently

Optionally, the billets that were cut to the required edge length can additionally be cleaned and bagged ready for sale in one working step. Optimise your firewood production with suitable conveyor belts, billet cleaning and bagging solutions from POSCH.

The SpaltFix S-415 Vario

Long operating hours thanks to WIDIA saw blade

This versatile firewood processor produces firewood requested in single varieties, and kindling ready for the stove with little effort.

High-performance saw blade with many benefits

The PowerCut with WIDIA saw blade impresses with its very high cutting speed, a long edge holding ability and little wear. In addition, neat wood chips for further use are produced.

SpaltFix S-415 Vario with AutoSplit 415

The combination of PowerCut and AutoSplit.

Saw unit "PowerCut S-415"

- → Log diameter 10-41 cm
- → Billet length 12-50 cm (adjustable in 1cm increments)
- → Hydraulic log feed system with 1.1-m feeding belt
- → Sawing system WIDIA saw blade Ø 100 cm
- → Hydraulic saw feed system with double gripper and automatically stop ventilation
- → Chip extraction connection Ø 15 cm
- → OnlyCut function
- → SawControl as standard

Splitting unit "AutoSplit 415"

- → VARIO splitting system
- → Billet length 12-33 cm
- → Variable billet edge length 4-15 cm
- → Number of billets max. per log section 25
- → Splitting force 12 t
- → Spring-loaded feed belt increases operational safety and reduces splitting forces
- → Oil cooler
- → Single conveyor connection to conveyor belt (16 l/min, max. 100 bar)
- → Conversion kit for short kindling as standard
- → Buffer belt 2 m (optional)
- → Automated central lubrication

SpaltFix S-415 Vario with AutoSplit 650

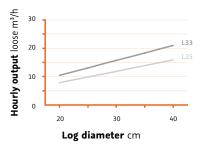

+ Billet length max. 50 cm

- + Number of billets max. per log section 50
- + Splitting power 16 t

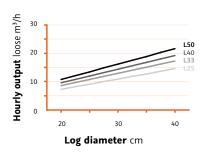

Great performance and neat billets

SpaltFix S-415 Vario with AutoSplit 415 Cutting lengths cm Billet edge length 10 cm (D14)

L25, L33

SpaltFix S-415 Vario with AutoSplit 650 Cutting lengths cm Billet edge length 10 cm (D14) L25, L33, L40, L50

Delivers the desired result for every application

On the AutoSplit, the edge length of the billets can be steplessly adjusted from 4 to 15 cm. In addition, mere round timber sections (Only-Cut function) and, with the included retrofitting kit, very neat kindling can also be produced for different groups of customers.

(♠) MULTI splitting system

SpaltFix K-540 Multi Firewood processing for professionals

The centre of attention: SpaltFix K-540 Multi

The MULTI splitting system for a great performance

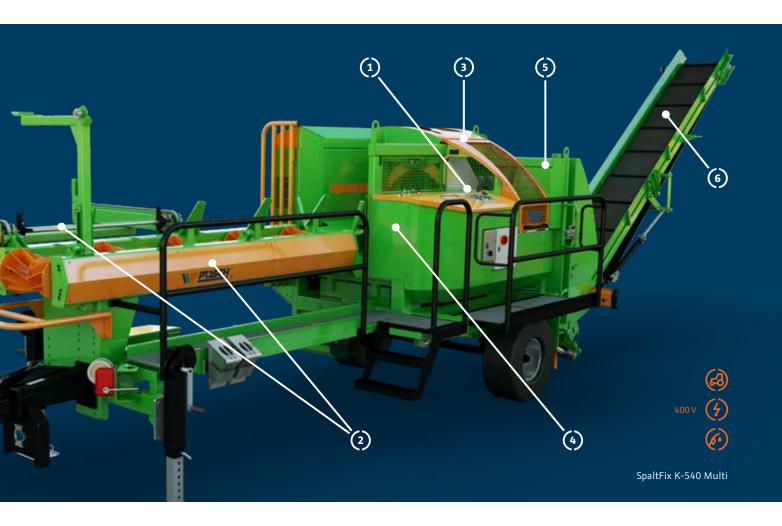

With the 2-hand joystick on the clearly structured control panel, it is easy to control all processes. The log manipulator is used to put the logs in the right position before processing.

The double chain conveyor with timber manipulator ensures a constant processing speed. Combined with a log support system, you can produce more cubic metres per hour.

SuperCut Harvester saw for fast and safe cutting

Thanks to the hydraulic chain and blade tensioning and the hydraulic double gripper, the SuperCut saw ensures safe and fast cutting. The hydraulic ejection rocker passes the log section on to the splitting unit.

Same-size billets without knife change

The hydraulically adjustable MULTI splitting knife produces an optimum result with every log diameter.

In that way, the machine produces up to 18 same-sized billets per work cycle.

True power inside SpaltFix

The pressure piece presses the timber with 35 t against the double-edged splitting knife and so quickly produces the maximum number of billets.

Neat further processing without further efforts

The conveyor belts transport the finished billets to the respective packaging solution. The combination of the timber cleaner LogFix and the PackFix system produces firewood of high quality and in neat packages.

SpaltFix K-540 Multi

Perfect for large volumes

Stationary or mobile - the ideal partners for a great performance. The wide variety of drives and additional solutions always make wood processing faster and more efficient.

Tireless firewood production

The result is impressive. The K-540 Multi manages up to 18 billets with a length of up to 50 cm. The SuperCut Harvester unit with automatic chain and blade tensioning cuts the logs into pieces with precision. The Autospeed function ensures the optimum forward speed during the splitting process. The hydraulic log rocker ensures continuous log transfer from the sawing area to the splitting area.

SpaltFix K-540 Multi

The next generation of firewood processing equipment.

- → Log diameter 10 55 cm
- → Billet length 25/30/33/40/45/50 cm
- → Max. number of billets per cycle 18
- → Hydraulic log feed with manipulator and two feed rollers
- → Sawing system SuperCut Harvester 75 cm
- → **Hydraulic log feed** with double gripper and automatic stop ventilation
- → MULTI splitting system(no wedge changing required)
- → Splitting force 35 t
- → Punch advance/return speed max. 28/33 cm/s with Autospeed+
- → **Hydraulics** double-cylinder system
- → Oil cooler
- → Operating hours counter

Ready for every application

With different drive options such as PTO, E-motor or diesel, this firewood processor from POSCH is always powerfully equipped and also suited for mobile applications. The optional angled conveyor belts ensure a compact transport position with this application. The optional timber loading crane ensures easy charging of the log support system.

processors

V FISCH

The centre of attention: SpaltFix K-700 Vario

Uses large logs to produce fine billets with variably adjustable edge length and of premium quality.

Everything under control with joystick control

Whole logs with a thickness of up to 70 cm are easily and carefully passed on to the PowerCut sawing unit and cut there according to the length With the clearly structured control panel, it is easy to control all processes.

Professional log feed for continuous charging

Depending on log volume and log diameter, longitudinal and cross conveyors can be individually combined with each other. The hydraulic log manipulator additionally ensures an optimum log position.

SuperCut sawing unit for logs up to 70 cm

The SuperCut Harvester unit with the 90 cm long blade and the hydraulic double gripper make sure that even the thickest logs are cut safely.

AutoSplit for fine billets of the desired size

With a splitting power of 19 t and the X-shaped splitting knife, the AutoSplit automatically chops up the logs. The steplessly adjustable feed lets you precisely determine the desired billet size with an edge length of 5-15 cm.

Buffer belt for safe and trouble-free continuous operation

The hydraulic ejection hatch and the standard buffer belt ensure smooth transportation of logs to the splitting process.

Firewood processing 4.0 with IIoT (Industrial Internet of Things)

A 7-inch display lets you control the AutoSplit comfortably. Thanks to an innovative IIoT connection you can upload your system's data to a cloud solution and access it any time. This allows us to perfectly advise you in customer service or perform software updates.

The mobile firewood production plant

The firewood processor with attached tractor or road chassis can be used anywhere! The moveable solution for professionals; particularly suited for machine rentals and commissions.

Neat billets and maximum efficiency

The SpaltFix K-Vario mobil produces neat billets with an adjustable edge length. Thanks to the professional hydraulic system with high-grade components, the SpaltFix ensures smooth and consistent top performance with low energy consumption.

The chainsaw unit and the AutoSplit splitting unit are controlled from the cabin which can be heated and cooled.

SpaltFix K-650 Vario mobil

The best system for neat firewood.

PowerCut K-650 saw unit

- → Log diameter 10-65 cm
- → Billet length 20/25/30/33/40/45/50 cm
- → Hydraulic log feed with manipulator and two feed rollers
- → SuperCut Harvester cutting system 90 cm
- → Hydraulic log feed with double gripper and automated stop ventilation
- → OnlyCut function
- → Chip extraction connection ø 15 cm
- → Residual wood discharge

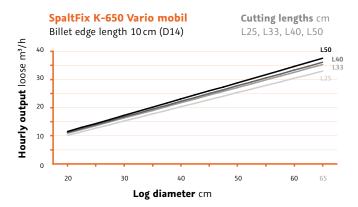

AutoSplit 650 splitting unit

- → VARIO splittingsystem
- → Billet length 20-50 cm (continuously variable)
- → Variable billet edge length 5-15 cm
- → Number of billets max. per log section 60
- → Splitting force 16 t
- → Spring-loaded feed belt increases operational safety andreduces splitting forces
- → **OptiSplit** automatic splitting stroke optimisation
- → Electronic control for increased operational safety
- → Touchscreen for convenient operation
- → Buffer belt 2 m
- → Optical sensor on the buffer belt
- → Timber volume calculation (VolumeControl)
- → Central lubrication automated

More cubic metres per hour, maximum efficiency and better quality

With an edge length adjustable between 5 cm and 15 cm, every billet meets the customers' requirements.

Optimise firewood production with suitable add-on units

Refine your firewood: Attached to the conveyor belt, the roller screen (optional) removes dirt and splinters from your billets.

Firewood processing 4.0 with IIoT connection

The successor to our stationary SpaltFix K-650 Vario turns entire logs with a diameter of up to 70 cm into profitable billets. With its new features, it's a full-on success.

More power, optimised highlights

Via a joystick you feed the logs to the cutting unit via four wider and even grippier feed rollers. The machine's log holding function was improved, while the new cutting unit makes changing blades and chains easier. At the same time, it features an even longer blade service life. The splitting unit offers 20 % more power.

To account for ground irregularities, the firewood processor's feet are now adjustable.

SpaltFix K-700 Vario

The stationary firewood processor for uniform firewood.

PowerCut K-700 cutting unit

- → Log diameter 10 70 cm
- → Billet length 20 50 cm (continuously variable)
- → Hydraulic log feed with manipulator and four feed rollers
- → SuperCut Harvester 100 cm cutting system
- → Hydraulic log feed with double gripper and automatic stop ventilation
- → Chip extraction connection ø 20 cm
- → OnlyCut function
- → Adjustable feet to account for ground irregularities, support frame optimised for cleaning
- → Oil cooler standard on saws and splitters, particularly useful in hot ambient temperatures
- → AccessoriesTURBO package for 25% higher performance, PRO package with 3/4" saw for less saw wear, operating/standing aid (see image left)

400V **(**

AutoSplit 700 splitting unit

- → VARIO splitting system with cable remote control
- → Billet length 20 50 cm (continuously variable)
- → Variable billet edge length 5-15 cm
- → Hourly output ~ 27 m³
- → **Splitting force** 19t
- → Spring-loaded feed belt increases operational safety and reduces splitting forces
- → Oil cooler
- → Triple conveyor belt connection for conveying, swivelling and tilting (16 l/min, max. 100 bar)
- → OptiSplit automated splitting stroke adjustment for faster processing
- → IIoT connection Firewood processing 4 via 7" touch screen
- → Buffer belt 2 m
- → Optical sensor on the buffer belt
- → VolumeControl timber volume calculation
- → Automatic central lubrication
- → Accessories TURBO package for 25% more power

High temperatures, cool hydraulics

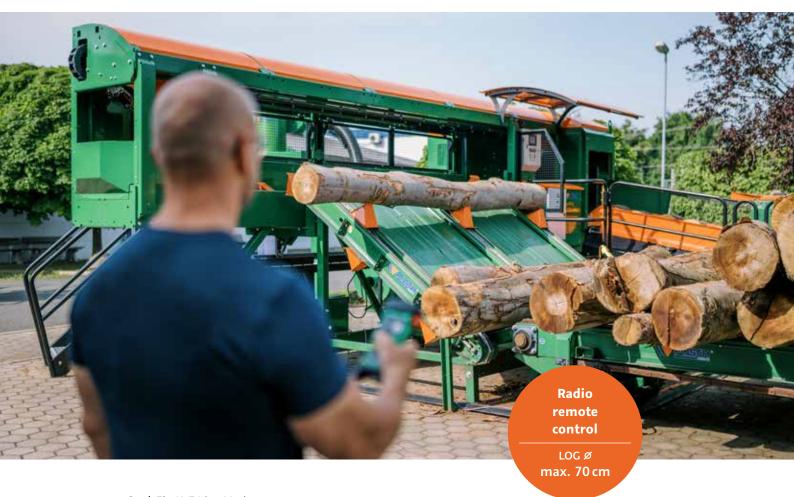

With oil coolers in both the cutting and the splitting unit, you can continue working around the clock even in high temperatures. The hydraulic system is optimally supplied with fluid and you benefit from long service life.

Firewood processing 4.0 with IIoT (Industrial Internet of Things)

A 7-inch display lets you control the AutoSplit comfortably. Thanks to an innovative IIoT connection you can upload your system's data to a cloud solution and access it any time. This allows us to perfectly advise you in customer service or perform software updates.

SpaltFix K-710 a-Vario

Cut, split and load – fully automated

It does all the work: this new firewood processor measures logs automatically and afterwards turns them into neat firewood.

Optical measurement at the push of a button

You can control log feed and cutting comfortably by means of a radio remote control. At the push of a button, you move the wood from the cross conveyor to the cutting unit via the separator and start the cutting/splitting process. The machine does the rest on its own.

Use the touch screen of the electronic control to adjust the desired cutting length and the admissible length deviations of the finished billets quite easily.

SpaltFix K-710 a-Vario with AutoSplit 700

400 V

The stationary, fully automated firewood processor.

PowerCut K-710 cutting unit

- → Log diameter 10 70 cm
- → Billet length 20 50 cm
- → SuperCut Harvester 90 cm cutting system
- → Autom. log feed via front feed
- → Accurate length determination thanks to CutControl
- → Residual wood discharge
- → Chip extraction connection ø 20 cm
- → Oil cooler
- → IIoT connection Firewood processing 4.0 via 7" touch screen
- → OnlyCut function
- → Light curtain for maximum safety at optimal accessibility
- → Radio remote control for automated mode and feed
- → Optional TURBO package for 25% higher performance

AutoSplit 700 splitting unit

- → VARIO splitting system with cable remote control
- → Billet length 20 50 cm (continuously variable)
- → Variable billet edge length 5 15 cm
- → Hourly output ~ 27 m³
- → Splitting force 19t
- → Spring-loaded feed belt increases operational safety and reduces splitting forces
- → Oil cooler
- → **Triple conveyor belt connection** for conveying, swivelling and tilting (161/min, max. 100 bar)
- → OptiSplit automated splitting stroke adjustment for faster processing
- → IIoT connection Firewood processing 4 via 7" touch screen
- → Buffer belt 2 m
- → Optical sensor on the buffer belt
- → **VolumeControl** timber volume calculation
- → Automatic central lubrication
- → Accessories TURBO package for 25% more power

Length determination with CutControl

The front feed allows for failure-free feed: it pushes the log to the chain saw, where it is optically measured (length determination). The log can be partitioned in such a way that there is no offcut or the system splits the piece of wood in equally sized pieces.

Maintenance and failure-free grates provide occupational and operational safety. The machine runs fault-free even in the rain, snow and fog.

Many extras

If the system is set up outside, it can be covered with a roof. Interior lighting makes working on overcast days a breeze.

Accruing offcut pieces are also ejected via this flap on the machine's rear.

Constantly supplies more logs

Log charging for large volumes

The suitable log support system holds the required volumes of logs and keeps them available for further processing. Depending on the requirements, the cross conveyor keeps the maximum possible number available and passes them on, with or without separator solution, to the longitudinal conveyor which supplies the SpaltFix continuously.

Professional log charging for maximum performance

The automatic SpaltFix firewood processors process large volumes of timber into finished firewood. The suitable charging systems facilitate continuous production in addition. POSCH offers you a series of different solutions for the most exacting requirements.

Flexible combinations for all applications

The useful longitudinal and cross conveyors for optimum log charging can be loaded quickly by tractor, forklift truck or timber loading crane. Depending on the requirements and work flows, the different units can be variably combined with each other.

The cross conveyor PLUS ¹ is the ideal professional solution for very large volumes of wood. The separator ² ensures optimum separation and transfer to the longitudinal conveyors. ³ ⁴

Roller conveyor or double chain conveyor as ideal connection for the SpaltFix

On the **roller conveyors**, the logs are supported by solid rollers which are driven hydraulically in each case. The V-shaped structure ensures a smooth log feeding process.

For log diameters over 55 cm, a **double chain conveyor** is used. The sturdy chain with pusher dogs glides maintenance-free on plastic guides. Available for lengths from 4 m to 6 m.

The logs are put down by means of a forklift truck or timber loading crane and made available for further processing. All log support systems can be combined with chain or roller conveyors. When they are passed on to the longitudinal conveyor, the logs are automatically separated from each other by the separator.

The roller conveyor and the double chain conveyor ensure continuous charging. The optional cleaning belt transports the Wast wood underneath the cross conveyor in the right container.

Depending on your requirements, the required supply of logs is always available

POSCH has the right log support system for all requirements:

- → The **cross conveyor** passes the wood on via chain strands to the **longitudinal conveyor** and is masterfully in control even when processing twisted logs. It can be used for a maximum log length of 6 m and a timber support up to 6.2 m.
- → The **cross conveyor PLUS** is the solution for real pros and very large volumes of wood. Depending on the version, up to 60 solid m³ of wood can be directly deposited and made available for the separator.
- → The **separator** ensures an optimum transfer of the individual logs to the longitudinal conveyor.

Wood processing made more profitable:

True efficiency for billet handling

An ideal solution: The LogFix family removes wood chips, bark and wood splinters from every billet and makes sure that the final product is neat. Then powerful conveyor belts transport the billets to the PackFix, the perfect bagging solution.

The cleaning pro separates billets from splinters

Deliver cleaner and, therefore, higher quality logs to your customers! With the log products, you clean your logs in the course of firewood production, thus increasing the quality of the wood and achieving a better price on the market!

For clean logs

Unwanted parts, such as chips, bark and wood splinters, are removed from the logs by rotating rollers. The wood splinters fall through a funnel into a container (e.g. BigBag) or onto an optional conveyor belt.

LogFix 15

The compact model for up to 15 srm/h.

- → Screen width 2.5 cm non-adjustable → Cleaning throughput max.
- → Screen surface approx. 140 x 53 cm
- → Ejection height up to 3.5 m
- → 6 rotating rollers, roller speed 70 rpm, Tilt adjustable 0-10°
- → Waste funnel as standard

- 15 loose m³/h
- → Undercarriage height adjustable
- → Optional radio remote control

LogFix 30

Up to 30 srm/h of cleaned firewood.

- → Screen width 2.5 cm
- → Screen surface 240 x 53 cm. tilt adjustable 0-10° (mounted at 0° as standard)
- → 11 rotating rollers, increasing roller speed (25 rpm to 75 rpm) in conveying direction
- → Standard standstill monitoring system for screening drums with automated reversal of rotating direction to prevent jams
- → Filling funnel 260 x 85 cm as standard
- → Waste funnel as standard

- → Cleaning throughput max. 30 loose m3/h
- → Undercarriage height adjustable
- → Belt width 40 cm, Conveyor belt width max. 65 cm for optionally conveyor belt
- → Optional filling funnel (T) 240 x 240 cm, also suitable for 3-side shovel feed (max. 2.5 loose m³)
- → Optional radio remote control

LogFix 60

High performance – for up to 60 srm/h.

- → Screen width 3 cm
- → 15 rotating rollers
- → Roller speed 93 rpm
- → Conveyor belt width max. 65 cm
- → Cleaning throughput max. 60 loose m³/h
- → Standard standstill monitoring system for screening drums with automated reversal of rotating direction to prevent jams
- → Screen width 87 cm

- → Filling chute to bucket feed 284 cm x 302 cm as standard
- → Radio remote control as standard
- → Optional increase of support frame height by 60 cm
- → Tilt adjustable 5° and 10° (set to 10° at factory)

Chip extraction unit & Zyklon

There' are always going to be splinters...

Work becomes easier when one's work station is clean and free from dust. After all, woodchips are more than waste – they can be put to good use at home or at the farm.

For a clean workplace

With the new "cyclone" you create a low-dust working environment: The cyclone filter separates dust and and chips from the incoming air and collects them centrally in a controlled manner. Available in different sizes - for circular saws, automatic saws and saw splitters!

Recommended for all log saws, circular saws, automatic firewood saws and smaller firewood processors up to a log diameter of max. 41 cm (e.g. POSCH SpaltFix S-375, K-415, S-415):

Chip extraction unit 350S Zyklon 350

- → Powerful HP drive or electric motor
- → Impeller made of solid steel
- → Mobile thanks to solid rubber wheels ø 30 cm and transport handle
- → High air flow performance up to 1,500 m³/h
- → Dimensions 67 × 75 × 107 cm (l × w × h)
- → 2-m suction hose ø 15 cm and 10-m pressure hose ø 15 cm
- → Reducing ring from ø 15 to ø 10 cm for the suction hose
- → Rotation range of pressure joint 270° in 10 steps

- → The ideal complement to the chip extractor 350
- → Ideal for log saws, automatic firewood saws and firewood processors (SpaltFix firewood processors)
- → For air volumes of up to 1,500 m³/h
- → Available in 2 sizes
- → **Optionally** with height adjustable mounting frame incl. container cover (incl. hose guide), with various containers or BigBags / compatible with various log saws, automatic firewood saws and firewood processors

Recommended for large log splitting systems up to a log diameter of max. 70 cm (e.g. SpaltFix K-540, SpaltFix K-650 or rather K-700 Vario, K-660 or rather K-710 a-Vario):

Chip extraction unit 400S Zyklon 400

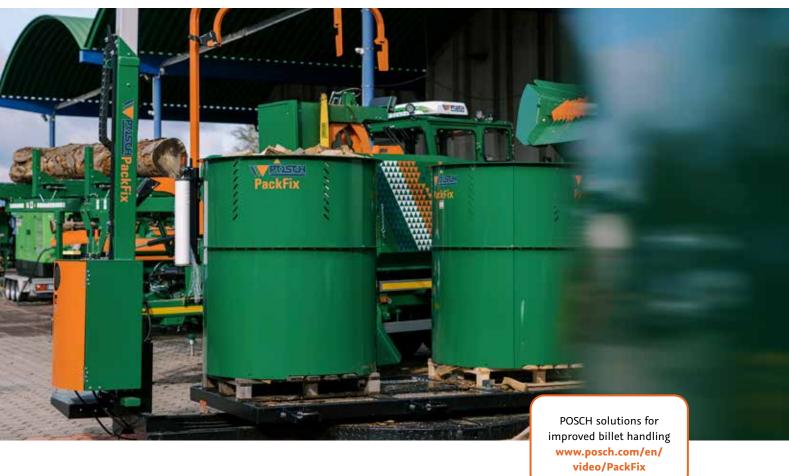

- → Powerful E-motor
- → Impeller made of solid steel
- → Mobile thanks to solid rubber wheels ø 30 cm and transport handle
- → Exceptional air flow performance up to 2,500 m³/h
- \rightarrow Dimensions 83 × 93 × 117 cm (l × w × h)
- → 2-m suction hose Ø 20 cm and 10-m pressure hose ø 20 cm
- → Reducing ring from ø 20 to ø 15 cm for the suction hose
- → Rotation range of pressure joint 270° in 10° steps

- → The ideal complement to the chip extractor 400
- → Ideal for log saws, automatic firewood saws and firewood processors (SpaltFix firewood processors)
- → For air volumes of up to 3,300 m³/h
- → Available in 2 sizes
- → **Optionally** with height adjustable mounting frame incl. container cover (incl. hose guide), with various containers or BigBags / compatible with various log saws, automatic firewood saws and firewood processors

PackFix

Drying, storing and delivering firewood

The PackFix is available in a stationary or mobile version and enables maximum speed for the packing up of billets.

Maximum bagging speed for more profit

Directly from the conveyor belt, the billets are collected in the drum and wrapped into an air-permeable mesh for optimum drying and storage. The sturdy packs can easily be stacked for space-saving storage. With the **hydraulic swivel table**, filling and bagging is carried out at the same time, the working speed is doubled.

PackFix Hydro

User-friendly and safe, reliable bagging of every solid cubic metre of wood.

- → For billet lengths up to 50 cm
- → Available in 2 versions: Stationary / Mobile
- → Filling drum volume: :
 1.63 m³ = 1.6 loose cubic metres
 = 1.0 cubic metres of timber
- → Filling drum: Ø 120 cm, height 145 cm with quick-change system

PackFix Hydro stationary

PackFix Hydro mobile

Reliable PackFix result in a few work steps

The PackFix drum is filled with a cubic metre of billets by means of a conveyor belt.

The rotary arm securely wraps the round bale mesh around the filling drum and the billets.

The drum itself does not rotate and is pulled upwards hydraulically.

As soon as the filling drum has been pulled up all the way, the mesh is severed and the pack of billets is carted away.

Ideal addition to every production line

The maximum speed per cubic metre provides for the perfect bagging solution for billets up to 50 cm.

Safely and quickly packaging billets

Our new LogPack is an all-round success! Its new, rotating table allows you to pack firewood safely and easily – it only takes a few moments and allows for up to 3 stations.

Looking for a simple solution to pack your firewood?

Look no further than the LogPack by Posch! It allows up to 3 operators to work around the rotating table, packing billets into mesh bags or environmentally friendly cardboard boxes in seconds. Optimal in combination with the LogFix 30.

LogPack

400 V

Using the LogPack, up to 3 operators can pack firewood and kindling

- → For billets of a length of up to 50 cm
- → Revolutions 4/min.
- → Packaging table working height adjustable (90 cm – 125 cm), Ø 150 cm
- → Friction clutch stops rotation as needed
- → Transport casters Ø 20 cm (steerable and lockable)
- → For up to 3 operators / for up to 3 packaging stations
- → Accessories for cardboard box and mesh packaging

LogPack with 3 mesh bag packaging modules

Safe, ergonomically correct & flexible

The focus is on ease of operation: Your hands are outside of the danger area, avoiding crushing injuries.

The packaging modules are quickly installed, adjustable in working height and position, making your job easier on your back and less tiresome.

Compact and mobile

Thanks to its compact dimensions LogPack barely needs any space during work or storage. For this purpose, the modules can be neatly folded up. LogPack can be moved via its standard transport casters.

Conveyor belts

Easier transportation of firewood

The powerful POSCH conveyor belts help you to transport billets faster to their destination. With a length of up to 8 m, they ensure a higher speed and a higher hourly throughput for the complete SpaltFix firewood line.

Get more work done

The **conveyor belt FSX** is especially designed for firewood processors. The wide design passes on a lot of billets to the billet cleaner LogFix, the LogFill intermediate storage or the PackFix system at maximum speed.

Conveyor belts FSX

Select the right conveyor belt.

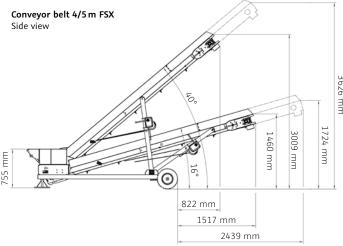

FSX 4/5 m

- → Ejection height 1.5 3.7 m
- → Belt width 55 cm
- → **Belt construction:**Bolted individual elements
- → Pneumatic-tyre wheels Ø 40 cm
- → Conveyor belt speed 70 cm/s
- → Belt tilt mechanically adjustable in steps
- → Belt swivelling mechanically

FSX 6/8 m

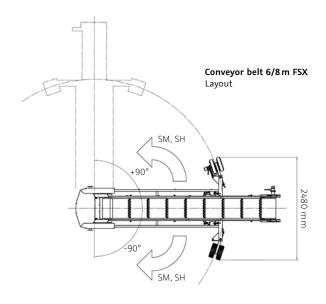

- → Ejection height 2.5 5.0 m
- → Belt width 55 cm
- → Belt construction: one-part rubber belt
- → Pneumatic-tyre wheels Ø 40 cm
- → Conveyor belt speed 70 cm/s
- → Belt tilt continuously variable by means of hydraulics
- → Belt swivelling hydraulically

Conveyor belt 6/8 m FSX Side view Conveyor belt 6 m NM NH Conveyor belt 6 m 3700 mm 3700 mm

Ideal for loading finished billets

Every conveyor is adjusted to its application quite naturally. All models are swivel-type and height-adjustable. The belt inclination can be mechanically adjusted in steps, or on request also hydraulically without steps.
