

The classic wood storage solution

The ideal addition for all wood splitters

Handy bundling devices get short and metre-long billets immediately ready for storage and transportation and make handling easy.

Bundling device for half-metre and metre-long billets

Makes billet handling particularly easy. After loading, the four standard belt guides bundle the billets into one or two bundles. The bundle of billets is safely tied up by means of the tensioning device. The tractor hydraulics lower the device, and after the locking lever has been released, the bundles can easily roll out. With a billet length of 1 m, each individual bundle has a volume of about one cubic metre.

Pressed-yarn cord bundling device

This solution makes billet handling particularly convenient and price-efficient. It reduces the price of the packaging of metre-long billets to less than one Euro. Pressed-yarn cord is easy to handle and environmentally friendly, a manual rope winch makes for convenient tensioning and compressing, thus no other tools are necessary. An insulating wooden stop panel for noise reduction during operation is included as standard.

The bundling device as ideal addition to all wood splitters: Bundles half-metre and metre-long logs with composite band.

Pressed-yarn cord bundling device is easy to handle and to dispose of.

Bundling device with composite band

The ideal accessory for all splitters: Bundles half-metre and metre-long logs with composite band.
